

AHMAD RIAZ

Full-Stack Developer • AI Engineer • Product Designer

Lahore, Pakistan • +92 323 7277228 • ahmi2662@gmail.com • linkedin.com/in/ahmad-riaza3ab22310

PROFESSIONAL SUMMARY

Full-stack developer, AI engineer, and product designer with 7 months of professional experience shipping production web and mobile products for international clients across SaaS, e-commerce, PropTech, and automation. Integrates OpenAI and Google Gemini LLM APIs into live products, builds daily with agentic AI tools (Claude, Cursor, Lovable), and designs the interfaces himself in Figma — owning projects end-to-end from UI design and database schema through backend, deployment, and app-store release.

TECHNICAL SKILLS

AI & LLM Engineering: OpenAI API (GPT-4/4o), Google Gemini API, vision & multimodal prompting, structured JSON outputs, function calling, prompt engineering, token/cost optimization

Agentic AI Tools: Claude, Cursor, Lovable, ChatGPT, Gemini

Design: Figma (UI/UX design, wireframing, prototyping, design systems, responsive & mobile-first layouts)

Languages: Python, JavaScript, TypeScript, SQL, C++, HTML, CSS

Frameworks: React.js, React Native, Next.js, Node.js, Express, NestJS

Data & Cloud: PostgreSQL, MySQL, Supabase, Firebase/Firestore, AWS (EC2, S3, SES), REST APIs, WebSockets, CI/CD, Git/GitHub

Concepts: OOP, DSA, System Design, ER/EER Modeling, DB Normalization, Payments & Webhooks (Stripe)

PROFESSIONAL EXPERIENCE

Full Stack Developer | Quishub (AI Product Studio)

Dec 2025 – Present

- Deliver end-to-end web and mobile products for international client accounts, owning frontend, backend, database design, and deployment.
- Integrate OpenAI and Google Gemini LLM APIs into production features — vision-based data extraction, structured JSON outputs, and content generation — with prompt engineering, fallback handling, and token-cost optimization.
- Design product interfaces in Figma before development, producing wireframes, high-fidelity screens, and reusable component systems, then implementing them pixel-accurately in code.
- Embed agentic AI tools (Claude, Cursor, Lovable) into the daily build workflow to accelerate delivery without sacrificing code quality.
- Architect RESTful APIs, real-time data-sync layers, and state management across concurrent client products spanning SaaS, e-commerce, PropTech, and automation.
- Design and optimize relational and NoSQL schemas (PostgreSQL, Supabase, Firebase) for high-concurrency workloads.
- Implement secure authentication (OAuth/JWT), Stripe payment integrations, and role-based access control across client platforms.
- Set up CI/CD pipelines and automated testing, cutting release cycles and reducing production bugs.

Front-End Developer | Cloud Service Group (CSG)

Mar 2023 – Aug 2023

- Engineered interactive, responsive web interfaces with JavaScript, HTML, and CSS, improving user engagement across the company's flagship product.
- Owned UI components from design hand-off to production in an agile, Git-based workflow with peer code review.
- Refactored legacy code to improve page-load speed, security, and scalability.

SELECTED PROJECTS

Get It Cheap — Digital License Key Marketplace | Client: Georgia

Stack: Next.js, Node.js, Supabase, Stripe, Webhooks, Job Queue

- Built an e-commerce platform for software license keys where secure delivery mattered more than the storefront, with an admin dashboard plus multi-currency and localization support.
- Engineered an automated fulfillment pipeline from payment through key allocation to a securely revealed key, with every reveal tracked and logged.

Nimdio — Multi-Tenant Cybersecurity Awareness SaaS | Client: Bertha Asare, Ghana

Stack: Figma, Next.js, NestJS, PostgreSQL, Supabase, WebSockets, AWS, PWA

- Sole designer and developer: designed the complete UI/UX in Figma — wireframes, dashboard layouts, and a reusable component system supporting white-label theming — then built it out end-to-end.
- Built a white-label, multi-tenant B2B platform delivering phishing simulation and security-awareness training campaigns, with each customer fully isolated.
- Developed the campaign engine, analytics dashboards, role-based access control, and an email deliverability layer for reliable simulation sends.

Leasy Link — Rental Management Mobile App | Client: Rebatho Mogegeh, Botswana

Stack: Figma, Cross-platform mobile (framework to be confirmed), NestJS, PostgreSQL (row-level security)

- Designed the full mobile UI/UX in Figma — user flows, screen designs, and a mobile-first design system — and implemented it across both platforms.
- Built a PropTech mobile app letting landlords track rent and utility payments automatically, replacing manual notebook/spreadsheet workflows.
- Shipped on iOS and Android with three subscription tiers (Starter, Growth, Business) via Google Play Billing, distributed across five Southern African markets: Botswana, South Africa, Namibia, Zambia, and Zimbabwe.

Postal Forwarding Automation — Mail Forwarding Platform | Client: Postal Solutions, US

Stack: Next.js, Node.js, PostgreSQL, Stripe, n8n, Puppeteer, Google Places API, IPP Printing, AWS (EC2/S3/SES)

- Built an end-to-end mail-forwarding automation system: residents pay online, addresses are validated against a private property database, and orders are batched nightly.
- Automated Avery label sheet and stamp-count cover sheet generation, dispatched directly to a network printer so staff only stamp and mail.
- Built an admin dashboard with live Excel sync as the source of truth and automated monthly reporting, on a self-hosted architecture running at roughly \$20/month versus \$133/month for an equivalent SaaS stack, fully client-owned.

AI BookLoop — Book Reselling Platform | Personal Project

Stack: React Native (Expo), Node.js, Firebase, OpenAI API, REST APIs

- Built a cross-platform mobile app helping students buy and sell affordable second-hand books, with secure auth, live data sync, chat, and order tracking over custom REST APIs and Firebase.
- Shipped an AI-assisted smart-listing feature using the OpenAI vision API to auto-fill title, author, and edition from a cover photo, returning structured JSON straight into the listing form.

Education System Database | Academic Project

Stack: MySQL, SQL (DDL/DML), ER/EER Modeling, Normalization

- Designed a relational database for an educational institution covering student records, faculty, scheduling, and assessments.
- Authored advanced SQL scripts with strict normalization and ER modeling to optimize administrative workflows.

EDUCATION

BS Computer Science | University of Lahore

CGPA: 3.67 / 4.00

2022 – 2026

Additional Training: Full-Stack Web Development Intensive (May–Sep 2023) — UI design, authentication, and full database integration.
